

VIBRATION RANGE

# SPYDER E-BATT

## Battery-powered portable vibrator

The Spyder E-BATT is the lightest battery-powered vibrator on the market in its segment. In addition, it can be used both with a backpack and with a strap, which makes it easier to handle and ergonomics. Its battery is interchangeable with other ENAR products, and allows continued work without interruptions.

**+ Cordless**

It doesn't require an electrical connection because it is battery-powered, which increases construction site safety by removing the need for cords.

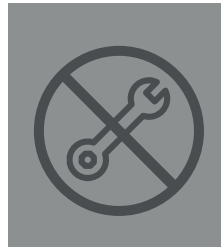

**+ Lightness and manageability**

Its design makes it compact and lightweight, which allows for easier transport.

**+ Eco-Friendly**

Eco-Friendly product that reduces environmental impact. Produces zero emissions and has low noise levels.

**+ Zero maintenance**

Due to its electronic conversion system, it has no parts that require maintenance or replacement.

- Available for 38, 48 and 58mm-diameter vibrator
- Aluminium body with plastic ends and rubber protection
- Light and easy to transport, being possible to use with backpack or strap
- Push button to start and stop with optional remote control
- Battery charge indicator display with base-closing lid that protects the battery against dirt and water
- Stable voltage provided along the whole discharging phase of the battery
